

**251201004-KM-01, Overview of Robotic Process Automation, NQF Level 4,
Credits 2**

**SUMMATIVE ASSESSMENT
MODULE ONE (1)**

Module #	251201004-KM-01
NQF Level	4
Notional hours	20
Credit(s)	2
Occupational Code	251201004
SAQA QUAL ID	119242
Qualification Title	Occupational Certificate: Robotic Processing Automation (RPA) Developer

Name	
Contact Address	
Telephone (H)

Note to the learner

This Learner Guide provides a comprehensive overview of the module. It is designed to improve the skills and knowledge of learners, and thus enabling them to effectively and efficiently complete specific tasks.

Purpose of the Module

The main focus of the learning in this knowledge module is to build an understanding of the purpose and use of RPA to imitate human actions to automate repetitive work processes ensuring the tasks are streamlined and accurate

The learning will enable learners to demonstrate an understanding of:

- ☐ KM-01-KT01 : Robotic process automation (RPA) basics 70%
- ☐ KM-01-KT02 : Background on RPA 30%

Entry Requirements

NQF 4

Provider Accreditation Requirements for the Knowledge Module

Physical Requirements:

- The provider must have lesson plans and structured learning material or provide learners with access to structured learning material that addresses all the topics in all the knowledge modules as well as the applied knowledge in the practical skills
- QCTO/ MICT SETA requirements

Human Resource Requirements:

- Lecturer/learner ratio of 1:20 (Maximum)
- Qualification of lecturer (SME):

NQF 6 in industry recognised qualifications with 1 year's experience in the IT industry

RPA vendor certification

- Assessors and moderators: accredited by the MICT SETA

Legal Requirements:

- Legal (product) licences to use the software for learning and training
- OHS compliance certificate
- Ethical clearance (where necessary)

Venue, Date and Time:

Consult your facilitator should there be any changes to the venue, date and/or time.

Refer to your timetable.

Assessments

Integrated Assessment Focus Area 1

Analyse the solution design document (SDD) for the RPA solution and prepare the technical design document (20%)

Integrated Assessment Focus Area 2

Develop resilient RPA solutions in accordance with the design documents applying best practices (30%)

Integrated Assessment Focus Area 3

Execute test procedures (prior to deployment) for the RPA solution to determine performance (15%)

Integrated Assessment Focus Area 4

Resolve workflow incidents, maintain the deployed RPA solution and implement changes ensuring continuous improvement (30%)

Integrated Assessment Focus Area 5

Work as member of a multidisciplinary team and function ethically and effectively in the workplace (5%)

PURPOSE OF THE QUALIFICATION

The purpose of this qualification is to prepare a learner to operate as a RPA Developer

The RPA developer works with other developers and solution architects to develop robotic processing automation software to emulate the business process defined by the process owner and documented by the business analysts. They configure software RPA solutions to perform automated business processes that typically interact with multiple applications and data

A qualified learner will be able to:

- Develop robotic process automation (RPA) solutions which emulate human actions during the project development stage using platform knowledge and data analysis capabilities
- Execute test procedures for evaluating the performance of the RPA solution through test cases and decide whether it passes or fails
- Modify and improve existing RPA solutions and build reusable components (post-production)

QUALIFICATION RULES

This qualification is made up of the following compulsory Knowledge and Practical Skills Modules: Knowledge Modules:

- 251201004-KM-01, Overview of Robotic Process Automation, NQF Level 4, Credits 2
- 251201004-KM-02, Basic Calculations and Logical Thinking: Revision, NQF Level 4, Credits 4
- 251201004-KM-03, Computers and Computing Systems, NQF Level 4, Credits 3
- 251201004-KM-04, Computing Theory, NQF Level 4, Credits 4
- 251201004-KM-05, Data, Databases and Data Scraping, NQF Level 4, Credits 4
- 251201004-KM-06, Introduction to RPA for Automation of Processes, NQF Level 5, Credits 12
- 251201004-KM-07, Robotic Process Automation (RPA), NQF Level 5, Credits 12
- 251201004-KM-08, Introduction to RPA Governance, Legislation and Ethics, NQF Level 4, Credits 1
- 251201004-KM-09, Fundamentals of Design Thinking and Innovation, NQF Level 4, Credits 1
- 251201004-KM-10, 4IR and Future Skills, NQF Level 4, Credits 4

Total number of credits for Knowledge Modules: 47

Practical Skills Modules:

- 251201004-PM-01, Basic Calculations for Programming, NQF Level 4, Credits 8
- 251201004-PM-02, Basic Programming, NQF Level 4, Credits 8

- 251201004-PM-03, Access, Analyse and Visualise Structured Data using Spreadsheets and Scraping Tools, NQF Level 5, Credits 6
- 251201004-PM-04, Model and Develop Robotic Automated Process (RPA) Solutions, NQF Level 5, Credits 14
- 251201004-PM-05, Execute Test Procedures for Evaluating the RPA Solution Performance, NQF Level 5, Credits 10
- 251201004-PM-06, Deploy RPA Solutions which Emulate Actions of a Human Interacting within Digital Systems, NQF Level 5, Credits 6
- 251201004-PM-07, Modify and Improve Existing RPA Solutions, NQF Level 5, Credits 6
- 251201004-PM-08, Function Ethically and Effectively as a Member of a Multidisciplinary Team, NQF Level 4, Credits 4
- 251201004-PM-09, Apply Design Thinking Methodologies, NQF Level 4, Credits 4

Total number of credits for Practical Skills Modules: 66

This qualification also requires the following Work Experience Modules:

- 251201004-WM-01, RPA Solution Design Interpretation and Development, NQF Level 5, Credits 28
- 251201004-WM-02, RPA Solution Performance Testing, NQF Level 5, Credits 24
- 251201004-WM-03, RPA Solution Deployment, Modification and Improvement, NQF Level 5, Credits 20

Total number of credits for Work Experience Modules: 72

EXIT LEVEL OUTCOMES

1. Analyse the Solution Design Document (SDD) for the RPA solution and prepare the Technical Design Document (TDD).
2. Demonstrate an understanding of knowledge of RPA and application of best practices when developing resilient RPA solutions in accordance with the design documents.
3. Execute test procedures (prior to deployment) for the RPA solution to determine performance.
4. Apply technical expertise to resolve workflow incidents, maintain the deployed RPA solution, and implement changes ensuring continuous improvement.
5. Demonstrate an ability to work as a member of a multidisciplinary team and function ethically and effectively in the workplace.

1. IAC0101 Discuss the evolution of automation

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

2. IAC0102 Demonstrate an understanding of the benefits of RPA.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
